

Oracle Lab1 – Part 2

Create .sql files to create and populate the Suppliers, Parts, Jobs, and Shipment tables we used in the first several labs.

You'll want to start your script files with the following:

```
SET FEEDBACK OFF  
PROMPT FILE CREATED BY yourname  
PROMPT CREATING SHIPMENT TABLE  
PROMPT  
SET TERMOUT OFF  
DROP TABLE Shipment CASCADE CONSTRAINTS PURGE;  
CREATE TABLE Shipment (
```

Then you'll have your code for creating the table and the INSERT commands for populating it.

Then you should end your script files with the following:

```
COMMIT;  
SET TERMOUT ON  
PROMPT SHIPMENT TABLE CREATED AND POPULATED  
SELECT Count(*) FROM Shipment;  
SET FEEDBACK ON
```

You should submit your .sql files as attachments to this assignment.
